

Marvell Policy Statement on Conflict Materials

Supplier Responsibilities

As part of Marvell’s commitment to corporate social responsibility and transparent business practices, Marvell does not support the use of conflict minerals¹ that are illegally mined, transported or traded to fund human rights violations, social unrest, political repression or conflict nor metal derived from such conflict.

The Securities and Exchange Commission has enacted rules to implement the provisions of the Dodd-Frank Wall Street Reform and Consumer Protection Act relating to disclosure and reporting obligations concerning conflict minerals that originated in the Democratic Republic of Congo (“DRC”) or an adjoining country (Angola, Burundi, Central African Republic, the Republic of Congo, Rwanda, South Sudan, Tanzania, Uganda and Zambia) (together with the DRC, the “DRC Covered Countries”).

While Marvell does not directly purchase these minerals from any source, Marvell is aware of the possibility that conflict minerals may be part of the electronic industry’s supply chain; in addition, Marvell is aware that the mining and processing of minerals is material to Marvell’s global supply chain. In recognition of this, Marvell has made a concerted effort to source these minerals responsibly. In support of our efforts, Marvell expects its suppliers to have in place policies and due diligence² measures that will enable Marvell to reasonably assure that the products and components supplied to us are DRC conflict free³. Marvell encourages its suppliers to do likewise with their suppliers. Marvell may ask its suppliers to cooperate with Marvell in providing reports, documentation and/or written assurances and taking such reasonable actions to enable Marvell to comply with rules and regulations applicable to the sourcing of conflict minerals.

Due to the complexities of the supply chain, Marvell will continue to work with its suppliers on an ongoing basis to verify that its products contain only conflict free minerals. We are committed to establishing and maintaining a due diligence process to support this Policy Statement on Conflict Minerals, which may be amended and updated from time to time.

¹ The term “conflict minerals” include tantalum, tungsten, tin and gold, which are all materials that are used in the semiconductor manufacturing process.

² Due diligence should be consistent with the OECD Guidance for Responsible Supply Chains for Minerals from Conflict-Affected and High-Risk Areas.

³ DRC conflict free “means that a product does not contain conflict minerals necessary to the functionality or production of that product that directly or indirectly finance or benefit armed groups” as defined in SEC Rule 13p-1 under the Securities Exchange Act of 1934, as amended.
